

8.35

8.35 A 70-ft-long, 0.5-in.-diameter hose with a roughness of  $\epsilon = 0.0009$  ft is fastened to a water faucet where the pressure is  $p_1$ . Determine  $p_1$  if there is no nozzle attached and the average velocity in the hose is 6 ft/s. Neglect minor losses and elevation changes.

$$p_1 + \frac{V_1^2}{2g} + z_1 = p_2 + \frac{V_2^2}{2g} + z_2 + f \frac{l}{D} \frac{V^2}{2g}, \text{ where } z_1 = z_2, V_1 = V_2 = V = 6 \frac{\text{ft}}{\text{s}}, \text{ and } p_2 = 0$$

Thus,

$$p_1 = f \frac{l}{D} \frac{1}{2} \rho V^2 \quad (1)$$

From Fig. 8.20 with  $\frac{\epsilon}{D} = \frac{0.0009 \text{ ft}}{(0.5/12) \text{ ft}} = 2.16 \times 10^{-2}$

and

$$Re = \frac{VD}{\nu} = \frac{(6 \frac{\text{ft}}{\text{s}})(0.5/12 \text{ ft})}{1.21 \times 10^{-5} \frac{\text{ft}^2}{\text{s}}} = 2.07 \times 10^4 \text{ we obtain } f = 0.052$$

Hence, from Eq. (1)

$$p_1 = (0.052) \frac{70 \text{ ft}}{(0.5/12) \text{ ft}} \frac{1}{2} (1.94 \frac{\text{slugs}}{\text{ft}^3}) (6 \frac{\text{ft}}{\text{s}})^2 = 3050 \frac{\text{lb}}{\text{ft}^2} = \underline{\underline{21.2 \text{ psi}}}$$
