To compare the effectiveness of the heuristic rules for selecting the set to be added to cover a point having no covering set, a randomly generated problem with 25 points and 100 sets was generated.

This Hypercard stack was prepared by: Dennis L. Bricker, Dept. of Industrial Engineering, University of Iowa,

Iowa City, Iowa 52242 e-mail: dennis-bricker@uiowa.edu

Best solution found

Random SCP (seed= 29155467)

Total cost = 44 Greatest Lower Bound = 42.81 Gap = 2.694 %

sets in the solution: 8

Set	Cost	# pts covered
1 2	3 3 4	6 3 8
2 3 4		
6 7	4 5 5	36335 5
18 22	9 11	3 5

of points with
multiple covers: 11

# times covered multiplier 2 2 0.0000 6 2 0.0000 14 2 0.0000 15 2 0.0000 17 2 0.2410 19 2 0.0000 20 3 0.0000 23 2 0.0000 24 2 0.8565 25 2 0.0000			
2 2 0.0000 6 2 0.0000 7 2 0.0000 14 2 0.0000 15 2 0.0000 17 2 0.2410 19 2 0.0000 20 3 0.0000 23 2 0.0000 24 2 0.8565 25 2 0.0000	Pt		multiplier
	14 15 17 19 20 23 24	2 2 2 2 2 2 2 2 2 2 2 2 2 2 2 2 2 2 2 2	0.0000 0.0000 0.0000 0.0000 0.2410 0.0000 0.0000 0.0000 0.8565

50 iterations of subgradient optimization were performed, and after each iteration, the heuristic algorithm was applied 3 times:

- the least-cost set covering the point was added
- the reduced costs of the 4 least-cost sets were computed, and the set having the smallest reduced cost was added.
- like the second rule, but with zero used as the multiplier of any point already covered.

Analysis of the Results

sets in best cover: 8 (sets are 1 2 3 4 6 7 18 22) # sets eliminated by penalty: 87

Heuristic	Option	Frequency	Mean	1st found
set selection rule for add		UB=LUB	error	LUB
original cost	(1)	14	3.50	13
reduced cost	(4,1)	28	2.12	6
recomputed reduced cost	(4,2)	24	1.90	13

Frequency of <

1 0	6	1
20	0	8
13	8	0

i.e., the second rule outperformed the first in 20 instances, and the third in 8 instances! Frequency of =

0	24	36
24	0	34
36	34	0
