

5.49

5.49 Water flows as two free jets from the tee attached to the pipe shown in Fig. P5.49. The exit speed is 15 m/s. If viscous effects and gravity are negligible, determine the x and y components of the force that the pipe exerts on the tee.

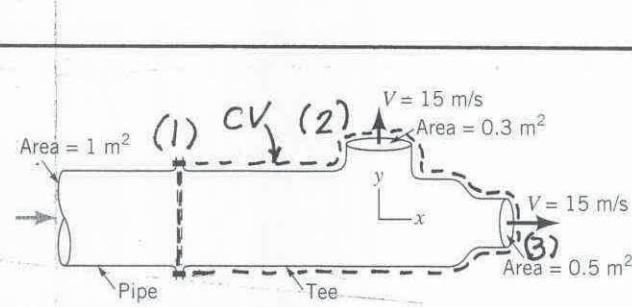

FIGURE P5.49

Use the control volume shown.

For the x -component of the force exerted by the pipe on the tee we use the x -component of the linear momentum equation.

$$\begin{aligned} -V_1 \rho V_1 A_1 + V_3 \rho V_3 A_3 &= PA_1 - PA_3 - P_{atm}(A_1 - A_3) + F_x \\ &= (P_{1, gage} + P_{atm})A_1 - (P_{3, gage} + P_{atm})A_3 - P_{atm}(A_1 - A_3) + F_x \\ &= P_{1, gage} A_1 + F_x \end{aligned} \quad (1)$$

To get V_1 we use conservation of mass

$$Q_1 = Q_2 + Q_3$$

$$\text{or } A_1 V_1 = A_2 V_2 + A_3 V_3$$

$$\text{so } V_1 = \frac{A_2 V_2 + A_3 V_3}{A_1} = \frac{(0.3 \text{ m}^2)(15 \text{ m/s}) + (0.5 \text{ m}^2)(15 \text{ m/s})}{1 \text{ m}^2} = 12 \text{ m/s}$$

To estimate $P_{1, gage}$ we use Bernoulli's equation for flow between (1) and (2)

$$\frac{P_{1, gage}}{\rho} + \frac{V_1^2}{2} = \frac{P_{2, gage}}{\rho} + \frac{V_2^2}{2}$$

$$P_{1, gage} = \rho \left(\frac{V_2^2 - V_1^2}{2} \right) = \left(999 \frac{\text{kg}}{\text{m}^3} \right) \left[\frac{\left(15 \frac{\text{m}}{\text{s}} \right)^2 - \left(12 \frac{\text{m}}{\text{s}} \right)^2}{2} \right] \left(1 \frac{\text{N.s}^2}{\text{kg.m}} \right)$$

$$P_{1, gage} = 40,500 \frac{\text{N}}{\text{m}^2}$$

Now using Eq.(1) we get:

$$\left[-\left(12 \frac{\text{m}}{\text{s}} \right) \left(999 \frac{\text{kg}}{\text{m}^3} \right) \left(12 \frac{\text{m}}{\text{s}} \right) \left(1 \text{ m}^2 \right) + \left(15 \frac{\text{m}}{\text{s}} \right) \left(999 \frac{\text{kg}}{\text{m}^3} \right) \left(15 \frac{\text{m}}{\text{s}} \right) \left(0.5 \text{ m}^2 \right) \right] \left(1 \frac{\text{N.s}^2}{\text{kg.m}} \right) =$$

$$(40,500 \frac{\text{N}}{\text{m}^2})(1 \text{ m}^2) + F_x$$

$$\text{or } -72,000 \text{ N} = F_x$$

$$\text{so } F_x = \underline{72,000 \text{ N}} \leftarrow$$

For the y component of the force exerted by the pipe on the tee we use the y component of the linear momentum equation to get

$$\begin{aligned} V_2 \rho V_2 A_2 &= F_y \\ (15 \frac{\text{m}}{\text{s}}) \left(999 \frac{\text{kg}}{\text{m}^3} \right) \left(15 \frac{\text{m}}{\text{s}} \right) (0.3 \text{ m}^2) &= \underline{67,400 \text{ N}} \uparrow = F_y \end{aligned}$$
