

2.81

Three gates of negligible weight are used to hold back water in a channel of width  $b$  as shown in Fig. P2.81. The force of the gate against the block for gate (b) is  $R$ . Determine (in terms of  $R$ ) the force against the blocks for the other two gates.

■ FIGURE P2.81

For Case (b)

$$F_R = \gamma h_c A = \gamma \left(\frac{h}{2}\right)(h \times b) = \frac{\gamma h^2 b}{2}$$

$$\text{and } y_R = \frac{2}{3} h$$

Thus,

$$\text{so that } \sum M_H = 0$$

$$hR = \left(\frac{2}{3}h\right)F_R$$

$$hR = \left(\frac{2}{3}h\right)\left(\frac{\gamma h^2 b}{2}\right)$$

$$R = \frac{\gamma h^2 b}{3} \quad (1)$$

For Case (a) on free-body diagram shown

$$F_R = \frac{\gamma h^2 b}{2} \text{ (from above) and}$$

$$y_R = \frac{2}{3} h$$

and

$$\begin{aligned} W &= \gamma \times V_{ol} \\ &= \gamma \left[ \frac{\pi}{4} \left(\frac{h}{2}\right)^2 (b) \right] \\ &= \frac{\pi \gamma h^2 b}{16} \end{aligned}$$

$$\text{Thus, } \sum M_H = 0$$

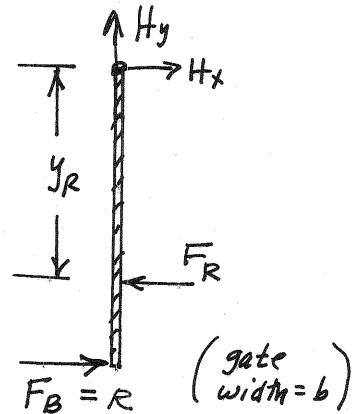

so that

$$W \left( \frac{h}{2} - \frac{4h}{6\pi} \right) + F_R \left( \frac{2}{3} h \right) = F_B h$$

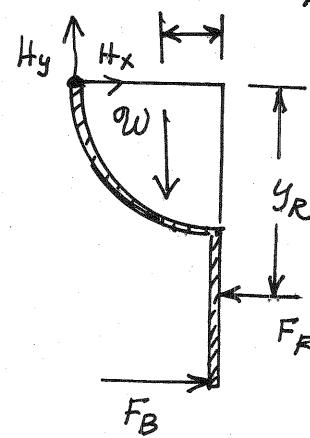

and

$$\frac{\pi \gamma h^2 b}{16} \left( \frac{h}{2} - \frac{4h}{6\pi} \right) + \frac{\gamma h^2 b}{2} \left( \frac{2}{3} h \right) = F_B h$$

(cont'd)

(See Fig. 2.18)

2.81

(cont.)

It follows that

$$F_B = \gamma h^2 b (0.390)$$

From Eq. (1)  $\gamma h^2 b = 3R$ , thus

$$F_B = \underline{1.17 R}$$

For case (C), for the free-body-diagram shown, the force  $F_{R_2}$  on the curved section passes through the hinge and therefore does not contribute to the moment around H. On bottom part of gate

$$F_{R_2} = \gamma h_c A = \gamma \left(\frac{3}{4}h\right) \left(\frac{h}{2} \times b\right) = \frac{3}{8} \gamma h^2 b$$

and

$$\begin{aligned} y_{R_2} &= \frac{I_{xc}}{y_c A} + y_c = \frac{\frac{1}{12}(b)\left(\frac{h}{2}\right)^3}{\left(\frac{3}{4}h\right)\left(\frac{h}{2} \times b\right)} + \frac{3}{4} \\ &= \frac{28}{36} h \end{aligned}$$

Thus,

$$\sum M_H = 0$$

so that

$$F_{R_2} \left( \frac{28}{36} h \right) = F_B h$$

$$\text{or } F_B = \left( \frac{3}{8} \gamma h^2 b \right) \left( \frac{28}{36} \right) = \frac{7}{24} \gamma h^2 b$$

From Eq. (1)  $\gamma h^2 b = 3R$ , thus

$$F_B = \frac{7}{8} R = \underline{0.875 R}$$
