

3.52

- 3.52 Water flows through the pipe contraction shown in Fig. P3.52. For the given 0.2-m difference in the manometer level, determine the flowrate as a function of the diameter of the small pipe, D .

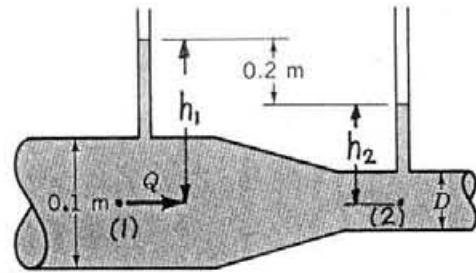

FIGURE P3.52

$$\frac{\rho_1}{\gamma} + \frac{V_1^2}{2g} + z_1 = \frac{\rho_2}{\gamma} + \frac{V_2^2}{2g} + z_2 \quad \text{with } A_1 V_1 = A_2 V_2$$

Thus, with $z_1 = z_2$ or $V_2 = \frac{(\pi/4 D_1^2)}{(\pi/4 D_2^2)} V_1 = \left(\frac{0.1}{D}\right)^2 V_1$

$$\frac{\rho_1 - \rho_2}{\gamma} = \frac{V_2^2 - V_1^2}{2g} = \frac{\left[\left(\frac{0.1}{D}\right)^4 - 1\right] V_1^2}{2g}$$

but

$$\rho_1 = \gamma h_1 \text{ and } \rho_2 = \gamma h_2 \text{ so that } \rho_1 - \rho_2 = \gamma(h_1 - h_2) = 0.2 \gamma$$

Thus,

$$\frac{0.2 \gamma}{\gamma} = \frac{\left[\left(\frac{0.1}{D}\right)^4 - 1\right] V_1^2}{2g} \quad \text{or} \quad V_1 = \sqrt{\frac{0.2 (2g)}{\left[\left(\frac{0.1}{D}\right)^4 - 1\right]}}$$

and

$$Q = A_1 V_1 = \frac{\pi}{4} (0.1)^2 \sqrt{\frac{0.2 (2 (9.81))}{\left[\left(\frac{0.1}{D}\right)^4 - 1\right]}}$$

or

$$Q = \frac{0.0156 D^2}{\sqrt{(0.1)^4 - D^4}} \frac{m^3}{s} \quad \text{when } D \sim m$$
