

Report of Exam 2

11/9/2016

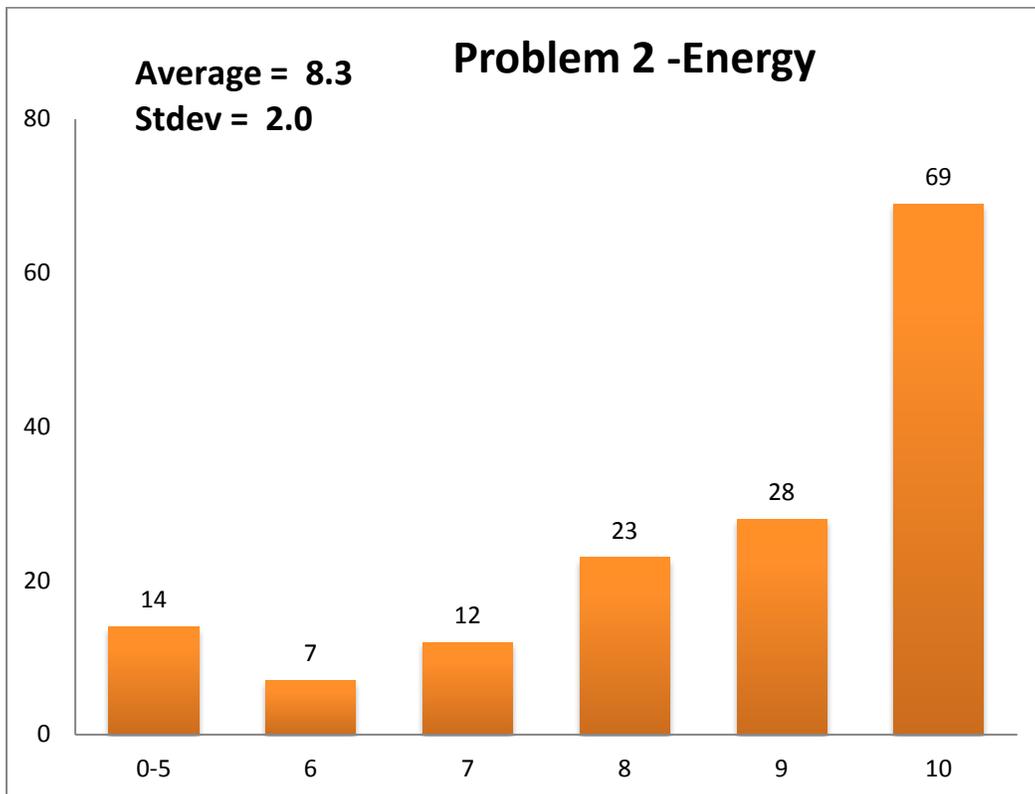

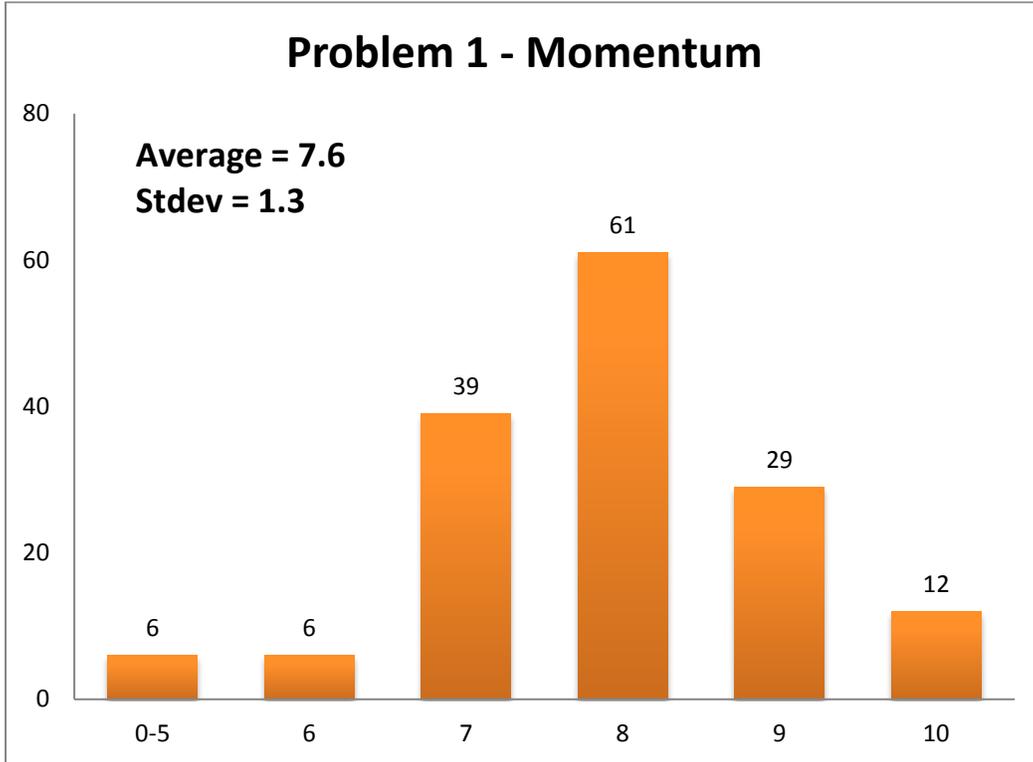

1. Summary

	Number of Students
Total	160
Attended	153
Missed	6
Makeup	1

2. Overall distribution

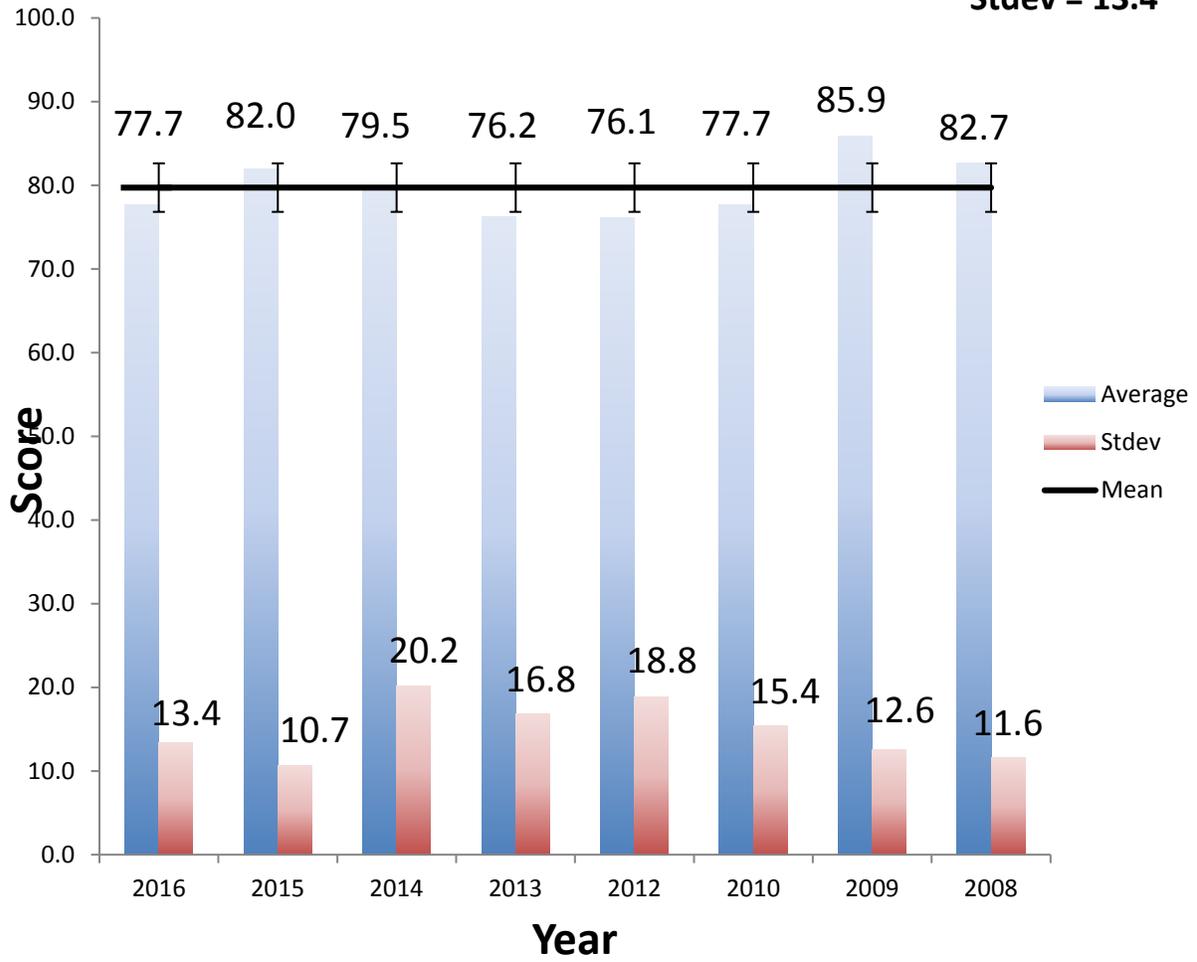

3. Distribution for each problem

Comparison with previous years

Average =77.7
Stdev = 13.4

4. Common mistakes

1) Problem 1 (Control Volume Analysis [Momentum])

- Wrong sign and/or missing $\sin(30)$ in the momentum equation
- Neglecting the weight of the nozzle and fluid

2) Problem 2 (Energy equation)

- Wrong assumption in applying Bernoulli equation (assumed $V_1=V_2$, $P_2=0$)
- Not knowing $Q = \frac{m}{\rho t}$

3) Problem 3 (N-S)

- Wrongly assuming gradient of velocity to be zero on wall
- Not knowing average velocity can be calculated by $\bar{V} = \frac{Q}{A}$

4) Problem 4 (Dimensional Analysis)

- Incorrect number of non-dimensional terms
- Incorrect dimensions for variables
- Not completing part (b)
