Outline

- Introduction
- Power curve definition
- What can be done with power curves
- Data mining and power curves

The University of Iowa Intelligent Systems Laboratory

Power Curve

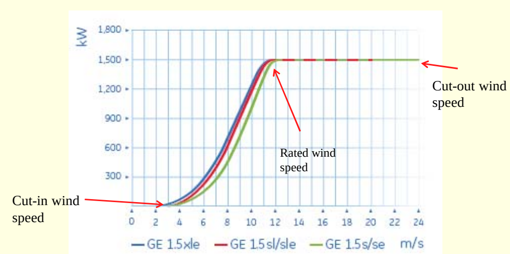
- Representation of the electric power produced by a wind turbine at different wind speeds (usually a graph)
- Power curve indicates the wind energy captured by a turbine

http://www.windpower.org/en/tour/wres/pwr.htm

The University of Iowa Intelligent Systems Laboratory

Turbine Manufacture's Power Curve

- GE 1.5 MW wind turbine



The University of Iowa Intelligent Systems Laboratory

Power Curve Plotted from Field Data

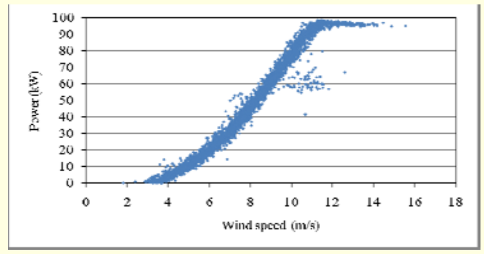
- GE 1.5 MW wind turbine (10 minutes average)

Time Stamp	Wind speed	Electric Power
10:00 AM	7.08	352.18
10:10 AM	8.79	552.14
10:20 AM	9.36	784.91
10:30 AM	9.65	805.39
10:40 AM	9.86	940.64
10:50 AM	9.84	965.74
11:00 AM	11.03	1203.76
11:10 AM	10.28	1023.21
11:20 AM	9.96	974.13
11:30 AM	9.71	853.73
11:40 AM	10.84	1204.88

SCADA = *supervisory control and data acquisition*

Power Curve Plotted from Field Data

- GE 1.5 MW wind turbine (10 minute average)



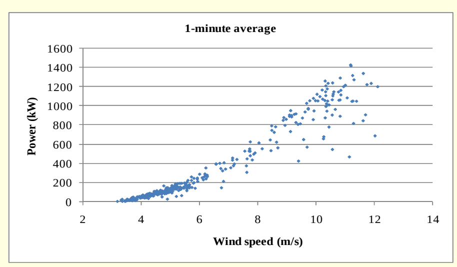
Power Curve Plotted from Field Data

- GE 1.5 MW wind turbine (1 minute average)

Time Stamp	Wind speed	Electric Power
1:00 PM	6.58	390.58
1:01 PM	6.23	351.57
1:02 PM	6.01	285.90
1:03 PM	6.20	288.90
1:04 PM	5.73	258.35
1:05 PM	5.74	220.68
1:06 PM	5.61	221.45
1:07 PM	5.27	187.55
1:08 PM	5.25	154.75
1:09 PM	5.48	154.25
1:10 PM	5.65	168.08
1:11 PM	5.65	174.10
1:12 PM	5.82	198.13

Power Curve Plotted from the SCADA Data

- GE 1.5 MW wind turbine (1 minute average)



Power Curve Plotted from the SCADA Data

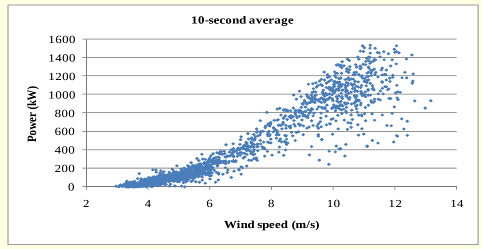
- GE 1.5 MW wind turbine (10 second average)

Time Stamp	Wind speed	Electric Power
4:35:20	6.74	371.60
4:35:30	6.77	417.90
4:35:40	6.47	389.40
4:35:50	6.32	369.60
4:36:00	6.24	372.60
4:36:10	6.93	422.40
4:36:20	6.70	403.30
4:36:30	6.38	381.80
4:36:40	6.11	361.20
4:36:50	6.04	339.20
4:37:00	6.00	313.00
4:37:10	6.13	310.89
4:37:20	5.86	300.20
4:37:30	5.65	286.80

The University of Iowa   Intelligent Systems Laboratory

Power Curve Plotted from the SCADA Data

- GE 1.5 MW wind turbine (10 second average)



The University of Iowa   Intelligent Systems Laboratory

Summary

- Wind turbine is not controlled as expected
- Harmful loads could be imposed on the turbine's components
- Power is not smooth, and
- Power quality is not good

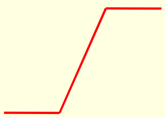
The University of Iowa   Intelligent Systems Laboratory

Applications of Power Curve

- Wind turbine (farm) power output estimation
  - Site selection
  - Layout design
  - Power forecasting
- Wind turbine (farm) monitoring
  - Outlier (fault) detection
  - Performance monitoring

The University of Iowa   Intelligent Systems Laboratory

Power Output Estimation



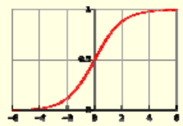
$$y = f(v) = \begin{cases} 0, v < v_{cut-in} \\ \lambda v + \eta, v_{cut-in} \le v \le v_{rated} \\ P_{rated}, v_{rated} < v < v_{cut-out} \end{cases}$$

Linear power curve function

y power output
v wind speed
λ slope, η intercept
P_{rated} rated power

The University of Iowa — Intelligent Systems Laboratory

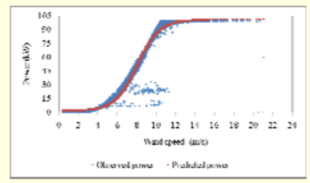
Power Output Estimation



$$y = f(v, \boldsymbol{\theta}) = a\frac{1 + me^{-v/\tau}}{1 + ne^{-v/\tau}}$$

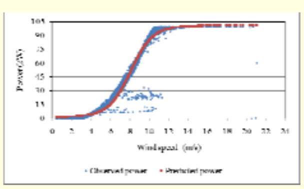
$$\boldsymbol{\theta} = (a, m, n, \tau)$$

Logistic function power curve



The University of Iowa — Intelligent Systems Laboratory

Logistic Function Approximation



Least square estimation of the power curve

$$\min_{\boldsymbol{\theta}} \sum_{i=1}^{N} (f(v_i, \boldsymbol{\theta}) - y_i)^2$$

Number of field data points

Power curve function predicting power output

Change Theta to minimize the square error

Actual measured power output

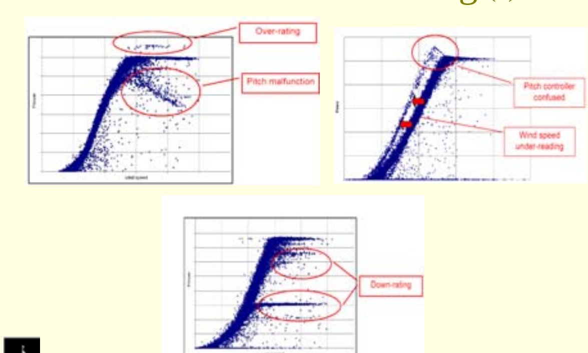
A8

Power Curve Monitoring (1)

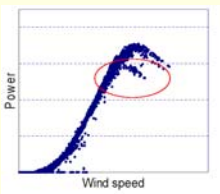


Slide 20

A8 If you could find actual picture of malfunctions on the web, then you could have one curve per page. I amnot sure if this is possible though.

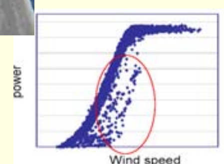
Andrew, 1/25/2009

Power Curve Monitoring (2)



Dirt or bugs on blades

Power Curve Monitoring (3)



Icing on blades

Power Curve Control Chart

Monitoring mean errors

$$UCL_1 = \mu_{Train} + 3\frac{\sigma_{Train}}{\sqrt{N_{test}}}$$

$$CenterLine_1 = \mu_{Train}$$

$$LCL_1 = \mu_{Train} - 3\frac{\sigma_{Train}}{\sqrt{N_{test}}}$$

μ_{Train} average training error

σ_{Train} standard deviation of training error

N_{Test} number of sample data points

Power Curve Control Chart

Monitoring error variation

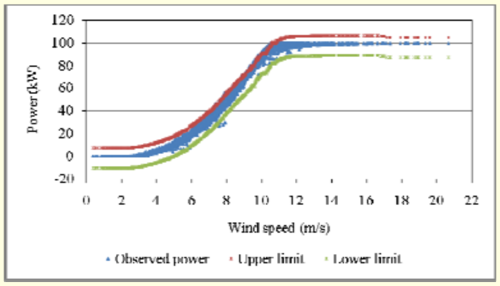
$$UCL_2 = \frac{\sigma^2_{Train}}{N_{test} - 1} \times \chi^2_{\alpha/2, N_{test}-1}$$

$$CenterLine_2 = \sigma^2_{Train}$$

$$LCL_2 = 0$$

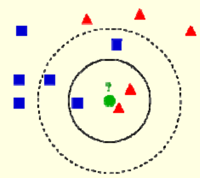
$\chi^2_{\alpha/2, N_{test}-1}$ chi-square distribution

Power Curve Control Chart



Data Mining and Power Curves

- k-NN (k nearest neighbors) algorithm



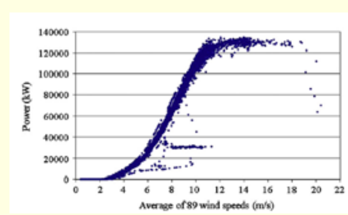
Build Wind Farm Power Curve

- Wind farm data

Time Stamp	Wind Speed Turbine 1	Wind Speed Turbine 2	…	Wind Speed Turbine N	Wind Farm Power
1/22/2008 10:00	6	5	…	5.5	20000
1/22/2008 10:10	6	9	…	9	40000

Build Wind Farm Power Curve

- *k*-NN for learning wind farm power curve

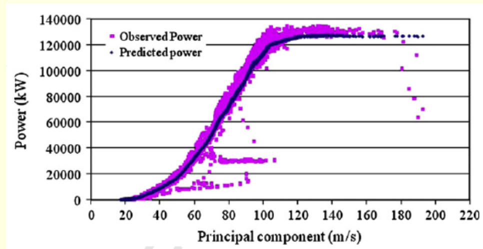


Wind Farm Data Preprocessing

- Remove bad data points
  - Turbine down time
  - Sensor errors
- Principal component analysis
  - Reduce dimensions
  - Reduce noises in the data

$$PCA = \alpha_1 v_{turbine1} + \ldots + \alpha_N v_{turbineN}$$

k-NN Extracted Wind Farm Power Curve



Evaluation of Model Performance

$$\text{MAE} = \frac{1}{n}\sum_{i=1}^{n} |\hat{y}_i - y_i|$$

$$\text{SDofMAE} = \sqrt{\frac{1}{n}\sum_{i=1}^{n}\left(|\hat{y}_i - y_i| - \frac{1}{n}\sum_{i=1}^{n}|\hat{y}_i - y_i|\right)^2}$$

$$\text{MAPE} = \frac{1}{n}\sum_{i=1}^{n}\left(\left|\frac{\hat{y}_i - y_i}{y_i}\right|\right)\times 100\%$$

$$\text{SDofMAPE} = \sqrt{\frac{1}{n}\sum_{i=1}^{n}\left(\left|\frac{\hat{y}_i - y_i}{y_i}\right| - \frac{1}{n}\sum_{i=1}^{n}\left|\frac{\hat{y}_i - y_i}{y_i}\right|\right)^2} \times 100\%$$
