Comments

- Few students used the mass flow rate instead of the volumetric flow rate in the equation $Q = VA$ in order to find V_{exit} .
- Some students did not go through all the steps in applying the force balance; by skipping the decomposition of the forces according to the coordinate system, they made mistakes with the sign.
- Some students did not include \underline{V}_{CS} , which was due to the rotation of the system and equal in magnitude to $R\omega$.
- Some students did not include the term $R\omega$ within the velocity part; instead, they added it to the torque.
