## Exam 1 Report <br> 10/11/2010

## 1. Summary

| Total number of students | 12 |
| :--- | :--- |
| Attended | 12 |
| Missed | 0 |
| Number of problems | 3 |
| Average grade | 81.25 |
| Standard deviation of grades | 10.34 |

## 2. Grade distribution

3. Comparison with past years

4. Individual problem breakdown

5. Grade distribution per problem

## 6. Comments

## PROBLEM 1

- Some student made calculation mistakes when calculating pi terms
- Some student made unit conversion mistake
- Some students assumed $\pi_{1}=\pi_{2}$ instead of $\pi_{1}=\phi\left(\pi_{2}\right)$
- Some students mixed the pipe diameter with sphere diameter

## PROBLEM 2

- Many students neglected the hydrostatic force at section 1
- Some students used wrong depth for calculating the mean pressure a section 1
- Some student made mistakes when calculating momentum flux (i.e. not having $\sin (20)$ or wrong sign)

## PROBLEM 3

- Some students applied the boundary conditions incorrectly (i.e $u(0)=0$ )
- Some student made wrong assumptions when applying momentum equations (i.e. not assuming $\mathrm{v}=0$, not neglecting gravity for y -momentum)
- Some students did not apply y-momentum to show $p=p(x)$
- Some students did not know how to calculate flow rate from given velocity function
